

PROCESSMAX PROFESSIONAL

With processMax Professional you can easily develop and deploy an endless variety of business and management processes using proven, active web-based technology. Your organization will be freed from static processes buried in dusty binders and manuals!

processMax seamlessly combines process content with patented intranet process server technology, delivering to your organization collaborative management of complex and concurrent activities. Users of processMax have immediate access to all the relevant information needed to accomplish their work; documents, forms, guidelines and notifications. Co-workers are automatically informed of tasking, actions, and status as work is completed. Productivity is improved and management visibility is enabled. Most importantly, processMax makes policy compliance a reality through effective process deployment.

Intranet-Based Process Deployment and Collaboration

Processes are deployed on your intranet, integrated with complete document management and workflow. processMax enables you to deploy your policies, procedures, guidelines, criteria, templates and forms in role-based, step-by-step instructions ready for use.

Project Repository

processMax includes web-based repositories for your projects, with powerful features for document management with version control, change control and process history. Rich search capabilities are also included.

Structured Forms

processMax provides customizable forms to ensure flexible, but structured, capture and management of data such as risks, change requests, or other data entities. User guidance can be built into the forms, along with pick-lists and other tools to improve the speed and accuracy of data entry.

Management Visibility

Managers can immediately see the status of all work products — removing the need to rely on status reports that create an administrative burden and may not even be accurate.

Automated Measurement and Reporting

processMax automatically records detailed measurements of progress, status, and quality in the on-line Measurement Repository. processMax generates reports in both graphical and tabular form, providing managers with real-time insight into project and organizational performance. This measurement capability is fully customizable: organizations can define additional measures and reports for automated collection and display by processMax.

Teamwork with an Integrated Coach

With processMax Professional, you can now easily revise the processes and procedures of your dynamic project management collaboration portal. Similar to having a coach who can develop new plays and feed them directly to the players during the game, processMax Professional provides your team unprecedented power in adaptation and lets them maintain their momentum as you set increasingly better strategy.

Deploy Processes that are Integrated with Day-to-Day Work

processMax has always trumped binders and web-based bookshelves because it integrates processes with day-to-day work maintained in the integrated document management system. With processMax Professional you can develop new business processes that will help your non-software business units balance the people, process, and technology required to get the job done. They will stay efficient and focused on their core activities. processMax can now be implemented for your Human Resource, Acquisition, Marketing, and IT departments.

Get More out of Process Development than Just Pretty Pictures

processMax Professional revolutionizes the previously static approach to process deployment. Traditional process modeling ends with attractive flowchart design diagrams that have very little value to end users. With processMax Professional you enter your processes and procedures into deployable processMax project portals that provide everything your team needs for planning, performing, and monitoring with fact-based management.

pragma Systems has been in the software process improvement and assessment business since 1990, and is the market leader in project management systems that comply with the Software Engineering Institute's Capability Maturity Model Integration® (CMMI). pragma Systems was one of the first companies licensed by SEI to perform software process assessments. pragma Systems uses its own products and is a CMM Level 3 development company, as determined by two independent SEI-licensed Lead Evaluators. processMax and related services are on the GSA Schedule.
